

X12 204 - Booking Tender (Air/Truck)

Test attachment - Option A pipeline validation (placeholder content).

This is a small placeholder PDF used to verify the specs/attachments/<slug>.pdf convention end-to-end: local file discovery by the build-downloads job, inclusion in the per-spec .zip bundle, upload as an individual GitHub Release asset, and the auto-generated "Download spec (.pdf)" link in the Kong Portal Document.

Note: this is original placeholder text for pipeline testing. It is not a reproduction of the official ASC X12 standard, which is licensed and sold by X12.org.
